

XM Satellite radio is an amazing technology. I have been a subscriber since fall 2003. The music selection offered is by far better than what can be found on any local am/fm radio stations. I have purchased new CD music because I heard it for the first time on XM. To be able to travel by car from my home to any other city in the USA and stay tuned to the same station is well worth what I pay for this service. With local radio I found I switched to the CD player for a better selection of music. Now I just change XM channels and very seldom put in a CD. Local radio, am and fm, is so plagued with commercials that during my 30 minute ride to work I might hear 3 songs on the radio. Most likely they will be 3 songs I do not even like. With XM Radio I am enjoying great quality music from the time I start my car until I arrive at work, commercial free. If I want commercials, weather, news or traffic updates I go to local radio, they excel at that. But I want great music and XM Radio excels at that. I am all for new advances in technology. It is unfortunate that big business does not know how to keep their customers really happy. Do not allow big business to lobby against XM Satellite Radio. Do not allow big business to take off the news, weather and traffic updates provided by XM Radio. Most of all, do not allow anyone to stop XM Radio from broadcasting to the United States. A very satisfied XM listener.
